

The generalized model for Interaction:

Regions of **Independence** where Solution Elements (ideas) support one Function, but have no effect on the other

Region of **Reinforcement** where Solution Elements support both Functions

Regions of **Conflict** where Solution Elements support one Function, but obstruct the other

$$\text{Interaction} = \frac{\text{Reinforcement} + \text{Conflict}}{\text{Reinforcement} + \text{Conflict} + \text{Independence}}$$
